

Task: Frontend Mini-Project

As part of the job interview, we ask you to prepare a small web application and present it briefly.

The goal of the task is:

Develop an interactive web application with the following features:

1. Create a 3D model

- Load the provided 3D model (STL file, attached to the email) into your application.
- The model should be visualized in the browser.

2. Interaction in 3D space

- Implement the ability to insert spheres (balls) into the scene.
- The balls should:
 - different sizes
 - different colors

could have.

3. Navigation in space

- Consider a sensible way for users to orient themselves and move around in 3D space.
- The goal is to be able to quickly and easily view each inserted ball.
- The specific implementation is left open and is up to you.

Technical framework conditions

- The application should be implemented as a **web application in the browser**.
- The choice of framework and technologies is free.
- Only free and open-source libraries may be used.
become.
- Ideally, you should present your solution on your own laptop during the meeting.
If this is not possible, please send us your project at least one day before the interview.

- Please also ensure that your web application works without a complicated setup.
can be started directly (e.g. as a finished build, by opening an HTML file, etc.).

Presentation in conversation

- Presentation duration: **max. 5 minutes**

- Please briefly present your solution:

Ideally as a live demo

Alternatively, with screenshots / short presentation

Important: The application should already be prepared and ready to go so that the presentation can begin without delay.
